

What should the Mikawa region Consider regarding Disaster Prevention Measures? (Social Studies for 6<sup>th</sup> grade)

<b>Aoi</b> I think that Okazaki City should directly let citizens know that they should have at least a 3-day food supply through posters and fliers.	<b>Onosuke</b> I would like to make friends with the people of shops selling food so that we may be able to get food from them.	<b>Rena</b> Looking at the hardened glass of cake shops, I came up with the idea that all glass should be changed to hardened glass.
<b>Yuki</b> Because citizens do not know what the disaster-prevention department is preparing and what it desires from them, it should to let them know about its' activity and what it wants them to do.	<b>Mayu</b> Citizens think they are safe because the ground of Okazaki City is stable enough, so they are depending upon the city. Therefore, it is better to instruct them to prepare by themselves.	<b>Yusuke</b> Okazaki City should increase the preservation of food in its disaster prevention warehouse, and at the same time, it should strictly instruct them that what is the most important is to protect themselves.
<b>Yui</b> I would like to let them know that it is important that the cooperation between the city and citizens, also the cooperation among citizens are important in order to overcome the difficulties.	<b>Ruu</b> It is important that Okazaki City appeals to citizens to make preparation of emergency goods such as food and first aid.	<b>Sayo</b> I know that many citizens are misunderstanding Okazaki City's activities, so that it is important to let them know its' activities.
<b>Takuto</b> Some citizens consider that they can get food from the city in an emergency. However, I think each citizen should prepare it by themselves.	<b>Shuna</b> "I think cooperation is important, such as appealing to citizens, not only depending on the city, but they should find what they can do by themselves and also asking shops for cooperation."	<b>Masahiro</b> Because there are some citizens who are not prepared themselves, I am worried if water and food would become short in an emergency.

<b>Mitsuki</b> Okazaki City has prepared enough for disaster. However, it has its own limits. "So it is necessary to appeal to citizens to increase the preservation of water and food for each family."	<b>Riisa</b> "Recently, as there is no big earthquake in Okazaki City, many citizens are not worried about disasters. So the city should appeal to them through workshops on earthquakes."	<b>Jin</b> "In order to make buildings safer for the occasion of earthquakes, it is important to set up the shop decorations and lighting equipment in shops, thinking what will happen when earthquake occurs."
<b>Ayu</b> I am worried because there are many citizens who are not prepared with disaster prevention measures among those who were investigated.	<b>Dan</b> I am relieved because I have heard that citizens are prepared to save their own lives, thinking of various things in the cases of emergency.	<b>Yuma</b> "Citizens and shop owners are worried about damage to buildings and falling goods, and they are trying to find the way to be relieved from them."
<b>Taiki</b> I think citizens should be prepared themselves, so that they will be safe whenever an earthquake comes.	<b>Aya (sample student)</b> Since citizens do not know well about disaster prevention, it is desirable that citizens and shopworkers cooperate with each other with what they know and what they can do.	<b>Hiroki</b> Since not so many citizens prepare first-aid boxes and other items, I think that the more food and other items should be increased in the disaster prevention warehouse.
<b>Hina</b> Since it was known that citizens did not know the fear of a tsunami by the investigation, I think that the Disaster Prevention Department should teach them about earthquakes and countermeasures for it.	<b>Yoshiki</b> Some citizens are misunderstanding that they can receive relief supplies in the super market, the City should inform them and instruct them to prepare themselves.	<b>Aina</b> I want the city to increase shelters so that citizens can feel easy, and at the same time, they also should be prepared themselves.

<p><b>Blue</b> The consciousness that the extension of disaster prevention measures is required.</p> <p><b>Red</b> The consciousness that citizens' consciousness of disaster prevention and preparation for disaster are important.</p> <p><b>Green</b> Children's consciousness of whether there is anything that they can do for Okazaki City and its citizens.</p> <p><b>Yellow sampling student</b></p>	<b>Mayo</b> I think that if the Disaster Prevention Department conveys the fear of the Nankai Trough Earthquake to citizen, it would change their consciousness.
	<b>Sohei</b> Because the school building is comparatively robust, I think it is better to increase water and food in its disaster prevention warehouse.

<b>Arata</b> Because we know that the possibility of tsunami is not zero %, I think Okazaki City should address the counter-measure for tsunami also.	<b>Kaho</b> Some citizens consider that all they have to do when a disaster occurs is to go to the super-market. The Disaster Prevention Department should instruct them how to deal with disaster.	<b>Atsushi</b> The half of citizens with whom an investigation was conducted said that they would rely on shops at the time of disaster. I think they should be prepared themselves for disaster.
<b>Emiri</b> I think I should consider what I can do when an earthquake occurs.	<b>Soma</b> I think Okazaki City should increase supplies at the disaster prevention warehouse, and at the same time, it should appeal to citizens to preserve a three-day supply of food for disaster.	<b>Yu</b> I know that there are some citizens who do not preserve food for disaster. So I think that more stock of water and food should be preserved in the disaster prevention warehouses.
