CURRENT SYMPOSIA: The science of marine natural products: Towards understanding of the physiology

and ecology of marine life [084]

CURRENT SUBJECT AREA: Biological

SESSION TYPE: Oral - Virtual

DESCRIPTION OF THE CONTRACT OF

Abstract

TITLE: GlcNAc-binding lectin attract and select symbiotic dinoflagellates for a coral *Acropora tenuis* to acquire them

ARSTRACT RODY

Abstract Body: Corals often symbiose with symbiotic dinoflagellates belonging to Symbiodiniaceae. Symbiosis with Symbiodiniaceae was essential for coral survival since corals mainly obtained carbohydrates from photosynthates produced by Symbiodiniaceae. Symbiodiniaceae contains several genera, and each coral species acquired few genera of Symbiodiniaceae from surrounding environment. Larval polyps of a coral *Acropora tenuis* also acquire some of Symbiodiniaceae genera, and did not others, Since the corals acquired Symbiodiniaceae by recognising the carbohydrates on the cell surface, lectins, or carbohydrate binding proteins, should participate in the acquisition of Symbiodiniaceae. We examine the hypothesis using *A. tenuis* polyps with a symbiont strain NBRC102920. Since the acquisition of NBRC102920 by polyps was inhibited by *N*-acetyl-glucosamine (GlcNAc), a GlcNAc-binding lectin, ActL, was purified. The anti-ActL antibody inhibited acquisition of NBRC102920, suggesting that ActL was involved in the acquisition of NBRC102920. ActL distributed in nematocyst, and attracted NBRC102920 by changing the motion of the symbiont NBRC102920 from circlular motion to linear motion. Moreover, the number of attraction of cells by ActL was different according to Symbiodiniaceae strains, and Symbioniaceae strains that were attracted more by ActL tends to be acquired more by polyps. These suggested that ActL participate in acqisition and selection of the Symbiodiniaceae by coral polyps.

AUTHORS (LAST NAME, FIRST NAME): <u>Jimbo</u>, <u>Mitsuru</u>¹; Takeuchi, Ryota¹; Tatsuno, Remi¹; YAMASHITA, Hiroshi²; Suzuki, Go²; Harii, Saki³; Shinzato, Chuya⁴; Amano, Haruna¹; Yasumoto, Ko¹

INSTITUTIONS (ALL): 1. Kitasato University, Sagamihara, Japan.

- 2. Japan Fisheries Research and Education Agency, Ishigaki, Japan.
- 3. Sesoko Station, University of the Ryukyus, Motobu, Japan.
- 4. Atomosphere and Ocean Research Institute, The University of Tokyo, Kashiwa, Japan.

SESSION TITLE: The science of marine natural products: Towards understanding of the physiology and ecology of marine life (#84)

Visa: Yes. If yes be sure to read the US Visa Process on the Pacifichem website.

Personalized visa letters are available for download once the abstract has been accepted by the symposium organizers and scheduled into a session for presentation. Visa Letters will be generated automatically for the presenting authors only in the presenting authors' accounts.

Presentation Type Detail: I will accept either presentation format: oral or poster.

Presentation Type Detail: (none)

Invited Paper: Ryuichi Sakai, ryu.sakai@fish.hokudai.ac.jp

Invited Paper Confirmation: Yes

Invited Paper: (none)
